At the Feliciano Center, creative spark and innovation meet the tools to develop ideas into successful ventures.

Part of the Feliciano School of Business, the Feliciano Center for Entrepreneurship is a resource for the entire campus, not just students pursuing a business degree. The Center offers a Minor in Entrepreneurship, and a 9-credit Certificate of Entrepreneurship. The Center, through its MIX Lab innovation and 3D printing center, also offers a 9-credit Certificate in Digitally Mediated Innovation Design.

The highly interactive and rigorous ENTR courses teach students the mindset of an entrepreneur, a valuable attitude that can help graduates succeed in any career, and help students learn how to be more creative and discover new ways to innovate. The Center’s minor and certificate programs can help students highlight real-world skills as they search for their first job, and during subsequent career moves. Entrepreneurial thinking is a mindset and attitude that many employers desire today. With every industry changing so rapidly, employers want to hire people who can think creatively and be innovative. Our courses show you how to be that employee.

The Feliciano Center also has a special mission to nurture women entrepreneurs through program development and mentorship.
